

**THE GOOD NEWS IS THAT
CANNABIS CAN HELP YOU SLEEP
BETTER NATURALLY.**

Cannabinoids are compounds in cannabis that interact with our endocannabinoid system to produce a range of effects, including relaxation, pain relief, and calm.

Tetrahydrocannabinol, or THC, is responsible for cannabis' psychoactive effects. It can help reduce anxiety and promote sleep by creating a euphoric feeling.

Cannabidiol, or CBD, is a non-psychoactive compound that relieves pain and anxiety.

THC and CBD can produce a powerful synergistic effect that can help improve sleep quality and reduce the symptoms of sleep disorders such as insomnia.

The relaxing and sedative properties of cannabis can help you get the rest you need for a refreshed and energized morning.

Relief Delivered
